Coronavirus (COVID-19) is a rapidly changing situation. Our therapists at Kascel Therapy are making decisions based on the most recent information provided by the World Health Organization, Centers for Disease Control and Prevention, Local Public Health Agencies, and Government Officials.

We understand that many of our clients have weakened immune systems and the safety of our clients, families, and therapists has always been a priority to Kascel Therapy. Therapists at Kascel Therapy have always followed universal precautions, making sure to wash our hands and the items we use during therapy to prevent transmission of germs.

We have put additional procedures in place as a response to the Coronavirus. These are the additional precautions we are taking as a response to the Coronavirus:

- A client who has symptoms or resides with a person who has symptoms of Coronavirus, including fever, cough, or difficulty breathing will not be scheduled for therapy for a minimum of 14 days
- A client who has traveled on a plane/train/cruise or resides within the home with someone who has traveled in this manner will not be scheduled for therapy for a minimum of 14 days following return from the trip
- A client who has been to a theme park or resides within the home with someone who has been to a theme park, including Disney/Universal/Sea World/Kennedy Space Center or similar will not be scheduled for therapy for a minimum of 14 days following return from the trip

Therapists are adding additional measures for preventing the transmission of potential germs, including but not limited to:

- Therapists and clients will wash hands before and after therapy sessions according to the guidelines established by the World Health Organization (<https://youtu.be/3PmVJQUcm4E>)
- Therapists and clients will remove shoes prior to entry into therapy area, with socks worn at all times
- Water cooler will be removed from the clinic and substituted with bottled water, as available
- Carpet and chairs in the clinic will be covered with an additional protective surface
- Therapists will utilize toys/objects within the home for clients seen within the home setting
- Therapists will only be addressing feeding by educating caregivers rather than directly incorporating strategies into the therapy session

We understand that additional procedures may take a few additional moments and that some clients will not receive therapy services for a couple of weeks. Thank You for your support and patience during this global situation. We will notify you as information is updated. If you have any questions, please do not hesitate to contact your child's therapist, Jennifer Baker (386)585-5955, or Kevin Baker (386)585-5917. We are here to help you navigate through this challenging time.
